

Lead Backend Developer

Job description

We're a small team that's growing fast and we're looking for a **Backend Software Engineer**. The projects on our plate are amazing, and we're looking for talented people to meet the exciting technical challenges we face. If you're intelligent and highly ambitious, we want to talk to you!

Also, just FYI, this position is located in New Delhi and we'll move you here!

We're looking for:

- **3-5+ year of experience on writing scalable web architecture**
- Working knowledge of **caching Databases (like memcache/redis)**
- Working knowledge of **Databases (MySQL/MongoDB)**
- Strong in Data Structures and Algo's

Bonus points if you have:

- A BE/B.Tech/M.Tech in Computer Science from a top school

What's in it for you:

- A brilliant team working on an array of new mobile ventures that you have the opportunity to create and shape
- The fast pace and agility of a venture-backed startup (many of us come from venture backed startups, and we can all attest to this!)
- Great amenities within a great building, and a creative work environment
